Had a similar problem on my 2007 Yaris petrol 1.0. For the last month there's been an intermittent ticking noise that speeded up and slowed down with engine revs. It would come and go without any seeming pattern. Tried changing the alternator - no change. Put in fresh Oil - still no change. Anyway, yesterday I discovered what it was.

Hi there - the rattling noise you describe is likely a heat shield on the exhaust system, or some other bracket attached to the engine/transmission. Engine vibration, however minimal, can cause loose metal to make an awful racket. Since getting your car up on a lift to check this out has become more difficult for most of us, I recommend a noise inspection performed by a mobile, professional ...
