Review the section "Investigating Life: Heredity and the Hungry Hordes." As indicated in the images below, the dominant allele (R) confers susceptibility to the Bt toxin, and a recessive allele (r) confers resistance to Bt. Suppose that a susceptible male mates with a resistant female. They have many offspring, a few of which are resistant to Bt.

10.4 Homeostasis. Before moving on to discussing the individual organ systems, it is important to review the concept of homeostasis. Homeostasis refers to the maintenance of a relatively stable state inside the body. Human organs and organ systems constantly adjust to internal and external changes in order to maintain this steady state.

Chapter 10: Structure Determines Function - Human Biology

Chapter Review In epithelial tissue, cells are closely packed with little or no extracellular matrix except for the basal lamina that separates the epithelium from underlying tissue. The main functions of epithelia are protection from the environment, coverage, secretion and excretion, absorption, and filtration.
