Lock key feature. Not all keyboards have an Fn key lock. This is purely subject to the make of a keyboard and is not something to do with drivers or a Windows 10 feature. The Fn key lock is enabled by holding down two keys; the Fn key, and the Fn lock key. The Fn lock key is usually the Escape key and it will have a padlock on it (see image below).

How to use the Fn key lock on Windows 10

Locking is a major part of every RDBMS and is important to know about. It is a database functionality which without a multi-user environment could not work. The main problem of locking is that in an essence it's a logical and not physical problem. This means that no amount of hardware will help you in the end.
