Several approaches can be used to solve the typical multiple effect evaporator homework problem. All textbooks 3,4,5 that cover evaporation present a pencil-and-paper iterative approach. Although this method works and requires no expensive software, it has a number of limitations. The calculations are quite tedious,

probably preferable to use long term rates from standard evaporation pans to

make rational evaluations of pond evaporation, The

evaporation rate is influenced by 1) Temperature of the water at the air-water surface. 2) Humidity of the air. 3) Area of the air-water surface.
