Group B streptococcal infection, also known as Group B streptococcal disease or just Group B strep, is the infection caused by the bacterium *Streptococcus agalactiae* (*S. agalactiae*) (also known as group B streptococcus or GBS). GBS infection can cause serious illness and sometimes death, especially in newborns, the elderly, and people with compromised immune systems.

Group B streptococcal infection - Wikipedia

Despite substantial progress in prevention of perinatal group B streptococcal (GBS) disease since the 1990s, GBS remains the leading cause of early-onset neonatal sepsis in the United States. In 1996, CDC, in collaboration with relevant professional societies, published guidelines for the prevention of perinatal group B streptococcal disease (CDC).

Prevention of Perinatal Group B Streptococcal Disease

Similarly, mortality for children under age five years (MDG 4) declined by 49 percent, from 12.4 million in 1990 to 5.9 million in 2015, but still substantially short of the 2015 target of a reduction by two-thirds, and the decline is much slower for neonatal deaths (Liu and others 2016). Within countries, when the population is disaggregated by income, education, or place of residence, wide ...

Interventions to Reduce Maternal and Newborn Morbidity and Mortality

Use this EKG interpretation cheat sheet that summarizes all heart arrhythmias in an easy-to-understand fashion. One of the most useful and commonly used diagnostic tools is electrocardiography (EKG) which measures the heart's electrical activity as waveforms. An EKG uses electrodes attached to the skin to detect electric current moving through the heart.

A peroxisome (IPA: [pɛɜˈlɒksɪˌsoʊm]) is a membrane-bound organelle, a type of microbody, found in the cytoplasm of virtually all eukaryotic cells. Peroxisomes are oxidative organelles. Frequently, molecular oxygen serves as a co-substrate, from which hydrogen peroxide (H₂O₂) is then formed. Peroxisomes owe their name to hydrogen peroxide generating and scavenging activities. They ...
